

Taylor Cawiezell

## The Project

For this project I chose to create a website about peppers and the difference between certain peppers and their origin.

In this site I included the following;

1. Two uses of html5 canvas with data visualization charts using chart.js.
2. I added jquery-scrolling animations with each link to <a> tags, as well as hide and fade in effects. I also utilized CSS animations and transitions adding more life to the site.
3. I added an interactive map showing the origin of certain peppers.
4. I utilized modernizer.
5. I used light box to create a slideshow for the peppers, and added a custom GIF animation for the loading screen and custom left and right arrows.
6. I used the audio tag to create background music.

Additional resources;

For this website I created all of the media except for the following images.

I used a world map SVG found at this site, giving full access to all viewers and users.  
<http://www.amcharts.com/svghttp://www.amcharts.com/svg-maps/?map=world-maps/?map=world>

For the gallery Images I used Google's advanced search and found images in the "free to use, share or modify, even commercially" option.

I found the song I chose on Westar Music logged in to Full Sail.
